► Sound Bank Version

The above sound list details all sounds available with ClariiOS 2.2 on the Clarii. Please note that the actual sound bank on your Clarii may differ, and the sound list may also change in later versions.

► Order of Sounds

The order of sounds as in the sound list cannot be edited, but by setting OK key to "Fav (Hold to Save)", you can save and rearrange up to 10 favorite sounds with individual transpose, octave shift, pitch bend range, elevation and roll control settings.

► Vibrato

In the Clarii, vibrato behaves in different ways depending on the sound.

- Embedded: When vibrato is "Embedded," it means the vibrato is an inherent part of the recorded sound sample itself. It cannot be adjusted or removed.
- Controllable: For "Controllable" vibrato, you can control its intensity. When Elevation is set to Vibrato, the vibrato effect changes with your elevation angle; a larger angle produces a stronger vibrato. However, if Elevation is set to Off, the sound will still have an automatic vibrato effect.

► Breath Articulation

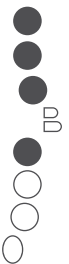

Breath articulation is triggered when a note begins at high velocity. It can be practically achieved by maintaining a high blow strength as player moves to the next note, or tonguing.

If you find it too easy to trigger, try a different "Breath Curve" such as "H1" or "H2-hard".
